

Point. Ask. Fix.

An offline repair assistant that sees the problem, listens to your question, and points at the exact part to fix. It runs entirely on the phone.

"Hi, I'm Fixy!"

Your machine shows “E4”. Now what?

A cryptic code, and the manual is long gone

Appliances and cars talk in codes like “OE”, “E4” or a warning light. Nobody tells you what they mean.

Help costs time and money

Helplines mean queues. A technician visit costs money and often takes days, even for a 2-minute fix.

It breaks where the signal is worst

Utility rooms, basements, terraces and parking lots. Online help and cloud AI can't reach you there.

The insight: most fixes are simple, like a clogged filter, a loose cover or low fluid. People just don't know **where to look**.

Meet Fixy, a repair friend in your pocket

Sees

Reads the error code or the engine bay through the camera.

Listens

Ask out loud, hands-free. Your hands stay on the machine.

Points

Puts a marker on the exact part, and it stays locked on as you move.

Talks you through it

One verified step at a time. Say "done" to go to the next.

Knows its limits

Refuses when unsure. Sends dangerous jobs to a technician.

100% on the phone. Works in airplane mode.

Two speeds: a slow brain and fast eyes

Slow brain: once per question
The VLM thinks for 1-3 s, never per frame

Fast eyes: every frame
The tracker keeps the marker locked at 30 fps

All on the iQOO 15
Snapdragon 8 Elite Gen 5. No internet permission

It never guesses about your safety

Offline and private

The app has no internet permission at all. Camera and voice never leave your phone.

Verified steps only

Repair steps come word for word from a checked knowledge base. The AI never invents parts, values or codes.

Safety first

Safety steps (unplug, engine off and cool) must be confirmed before any repair step unlocks.

Knows when to stop

Wiring or anything risky? Fixy says “please call a technician” instead of guessing.

What you'll see, and what comes next

A real car's engine bay

Check the oil, coolant, washer fluid and battery. Then ask about wiring: Fixy refuses and suggests a mechanic.

A washing-machine control panel

Read an error code (drain, door lock, water inlet) and get guided, step by step, to the exact part.
